

Facade  
Solutions

# Ceramic Facade

## Adhesive System

The ceramics are bonded with aluminum carrier profile with double-sided tape and polyurethane based high-strength  $-40^{\circ}$  and  $+100^{\circ}$  mastic. This system is the most economical method of Ceramic cladding application and can be applied in all sizes. Optionally, it can be applied as open joint or closed joint. In the closed joint system, in addition to the open joint application, vertical and horizontal joint gaps of the ceramics are closed by using special type aluminum profiles in the desired RAL color to the vertical and horizontal joints of the coating material.

## Horizontal Suspended System

In the horizontal suspension system, aluminum clips are fixed on the sub-construction formed by aluminum anchors and Vertical Carrier T Profiles. Ceramic Plates are bonded to the façade using upper, intermediate and lower horizontal profiles. And the coating process is finished by hanging on the carrier clips. The biggest advantage of this system is that vertical joints can be offset and the joint width is 2mm.

# Ceramic Facade

## Clip-On System

In this system, after mounting Aluminum Brackets on the wall, special type carrier profiles are fixed to the building facade according to the project, then Porcelain Ceramics are mounted in carrier aluminum profiles with Ral color or natural stainless steel clips and EPDM wicks. Can be used in all sizes. Due to the static values it can be used in high-rise buildings.

## 4 Clip-On System

Aluminum anchors and vertical bearing T profiles are formed on the sub-construction of the ceramic tiles depending on the location of 4 or 2 with intermediate and lower stainless clips are fixed to the carrier profiles. The epdm wicks in the clips prevent direct contact of the ceramic to the profile and ensure a good fit in the clips. Stainless Clips can be painted in Ral Color. Economical application is a fast and safe system.

# Ceramic Facade

## Hidden Channel System

In this system, the supporting sub-construction consisting of aluminum anchors and aluminum vertical T-Profiles is fixed to the façade. The ceramics are mounted to the horizontal bearing construction with the help of special type aluminum concealed clips attached to the dovetail ducts opening at four points on the rear surfaces. It is generally economical to apply with 60x60, 60x120, 50x100 cm materials.

## High Builds System

Ceramics according to static calculation Aluminum carrier Box or T profiles polyurethane based high strength -40. bonded with a chemical that does not lose its elasticity at +100 degrees. The joints are closed with Ral color omega type printing profiles and clips on the horizontal and H type profiles on the vertical. It is a system that can meet the static calculation requirements against wind loads in high-rise buildings. This system has been proven in very large projects and has been applied in 55-storey buildings.

# Sinterflex Facade

## Hidden Clip-On System

In this system, the supporting sub-constructs made of aluminum brackets and aluminum vertical T-Profiles are fixed to the building façade. Sinterflex panels are attached to the top and bottom surfaces of the panels with horizontal cross-section aluminum suspension profiles with the help of polymer adhesive. Sinterflex Panels are mounted to the carrier construction by means of special Type Aluminum Concealed Clips and Epdm rovings and the curtain wall installation is completed.

# Sinterflex Facade

## Mechanic Bonding System

In Sinterflex Bonding system, aluminum anchors and aluminum vertical T profiles are applied on the carrier sub-structure by bonding Sinterflex Panels using special type polyurethane adhesive and HORIZONTAL OMEGA PROFILE. Thickness of Sinterflex panel to be used in this system is recommended to be 3 or 5mm. This system can be used in indoor and low-rise buildings

## Compact Laminate - HPL

### Bonding System

In this system, Aluminum Laminated Anchors and Aluminum Vertical T Profiles are applied on the carrier sub-construction by bonding Compact Laminate sheets using special type polyurethane adhesive and double-sided tape. This system is preferred because of its economical and fast installation. Open joint gaps can be left as well as joint gaps can be applied by closing with aluminum joint profiles.

## Terra Cotto

### Single Wall System

In this system, after the Aluminum Brackets are mounted on the wall, the vertical carrier T Profiles are fixed to the building facade according to the project, then the special type carrier system is mounted on the T profiles and the sub-construction is completed. Terracotta panels are hung on the construction and the facade coating process is completed.

## Terra Cotto

### Double Wall System

In this system, T Pro fi ls are fixed to the building facade with Aluminum Brackets in accordance with the project, and then the horizontal carrier system pro T le is installed on the T pro fi les and the sub-construction is completed. The double-skinned Terracotta panels are hung on the construction together with special type clips and omega shaped vertical joint pro pro le and the facade coating process is completed.

## Terra Cotto

### Faveton System

Produced from 16mm extrude ceramic, Faveton Bersal is a special facade covering with all the advantages of porcelain ceramic with terra cotto appearance. Faveton facade panels weighing 32 kg / m<sup>2</sup> provide heat and sound insulation. They are available in dimensions of 25,30,40cm in height and 60,80, 90,100 and 120cm in width. Faveton can be applied very quickly and easily with its special mounting system. In this system, Faveton Facade Panels are mounted to the horizontal profile by means of the upper and lower inclined channels on the back sides of the carrier sub-constructions formed by aluminum anchors and aluminum vertical T-Profiles and horizontal sections with special cross-sections. It is a system with high fire resistance.

# Frontek Facade

## Multi Clips-On System

Frontek is a very tough, durable, long lasting and maintenance free, high performance, weather resistant, water absorbing, non-freezing, lightweight facade ceramic which is not affected by thermal shocks. It provides effective heat and sound insulation. Frontek facade panels are available in standard sizes of 40.5 cm x 80 - 90 - 100 cm. Frontek can be applied very quickly and easily with its special mounting system. In this system, Frontek Facade Panels are mounted by means of special Type Stainless Steel Clamps on the carrier sub-constructions made of aluminum anchors and aluminum vertical T Profiles.

# Thermowood Facade

## Mechanic System

As a result of the thermal modulation, Thermowood siding has been maximized against all weather conditions, rot, microorganisms and pests. Mounted on aluminum sub-construction. In this system, Thermowood boards are applied with special type of glue and screws on the carrier sub-construction which is composed of aluminum anchors and aluminum vertical T and L Profiles.
